

LUMINATE

FREQUENTLY ASKED QUESTIONS

Q: What is LUMINATE?

A: LUMINATE is a collagen-stimulating peptide serum that combines three fast-acting peptides (GHK-Cu, Argireline, and Leuphasyl) to help reduce the appearance of wrinkles and promote firmer, healthier skin that glows.

Q: What can LUMINATE help with?

A: LUMINATE works by helping muscles remain at rest, curbing the formation of unwanted wrinkles and expression lines. LUMINATE delivers an advanced combination of peptides that have been shown to help decrease the appearance of wrinkles. One study showed that Argireline helped reduce the depth of wrinkles up to 17% after 15 days and 30% after 30 days.

Q: What is a Peptide?

A: Peptides are short chains of amino acids. The amino acids in a peptide are connected to one another in a sequence by bonds called peptide bonds. Typically, peptides are distinguished from proteins by their shorter length, although the cut-off number of amino acids for defining a peptide and protein can be arbitrary. Peptides are naturally occurring biological molecules. Peptides are found in all living organisms and play a key role in all manner of biological activity. Many health and cosmetic products contain different peptides for many uses, such as their potential anti-aging, anti-inflammatory, and muscle-building properties.

Q: What is GHK-Cu?

A: GHK-Cu is a naturally occurring copper peptide that is produced in many tissues in the body. GHK-Cu has a variety of roles in the human body, including, but not limited to, promoting activation of wound healing, attracting immune cells, antioxidant and anti-inflammatory effects, and stimulating collagen and glycosaminoglycan synthesis to help reduce wrinkles and fine lines in the skin.

Q: What is Argireline?

A: Argireline is the first peptide to reduce expression lines by relaxing the muscles responsible. Argireline is a smaller subsection of the Botox peptide sequence, and like the larger molecule, works to reduce expression lines and wrinkles by blocking nerve to muscle messaging.

Q: What is Leuphasyl?

A: Leuphasyl is a pentapeptide that helps inhibit the release of acetylcholine in the synapses to reduce muscle contractions, which reduces the appearance of wrinkles.

Q: What is the recommended dosing schedule?

A: Apply 4 clicks to face (or desired area) once daily. Each click is 0.25mL. Avoid contact with eyes.

Q: Can LUMINATE be used in conjunction with Botox injections?

A: Yes. LUMINATE can be the perfect complement to many Botox treatments and may be used on areas of the face that may not be suitable for injections.

Q: Can this product be taken by patients that are pregnant or nursing?

A: LUMINATE should not be used by pregnant or nursing patients and individuals under the age of 18.

Q: Can men and women use LUMINATE?

A: LUMINATE poses no issues that would be sex-dependent and shows to be successful in both men and women.

Q: Can I drink alcohol while using LUMINATE?

A: LUMINATE does not exhibit any chemical properties that would require any food or dietary restrictions while taking.
